Education

NSBM Green University **2023-present**

BSc (Hons) in Software Engineering

Anuruddha College, Kandy **2008 - 2022**

Advanced Level – Economics-A, Accounting-C, Business management-B

Projects

my Clinic - Medical Center POS System (Group Project) **2025 - 2026**

Built a role-based POS system integrating clinical and pharmacy workflows for efficient patient management, prescriptions, inventory, and billing. Features included real-time dashboards, automated stock/expiry tracking, and seamless doctor–pharmacy integration.
Technologies: **React, Tailwind CSS, Node.js, Express.js, MySQL, Figma,Git**

Warehouse-management System (University Group Project) 2023

Designed and implemented a Java-based warehouse management system with CSS for the frontend. The system streamlines inventory control, stock tracking, and order handling, helping to improve accuracy and efficiency in warehouse operations.
Technologies: Java Servlet**,** Tomcat Server , JS,**CSS**

Reliance Traders Official website (Solo Project) **2025**

Developed the official website for a USA-based digital marketing agency offering web development, marketing, and digital solutions. Focused on modern design, responsive UI, and smooth user experience
Technologies: **React.js, Tailwind CSS, Node.js, Figma,Git**

O-Dinor – Online Clothing Brand Website (Group) **2023**

Built a group e-commerce website for the O-Dinor clothing brand with product catalog, shopping cart, order/contact forms, and responsive UI. Server-side logic implemented in PHP; frontend built with HTML, CSS, and JavaScript.
Technologies: **PHP, HTML, CSS, JavaScript Figma**

AquaAlert – Water Management Smart System **2025**

Developed a smart water management platform designed to connect citizens with water authorities through real-time reporting and intelligent analysis. The system improves response time, enhances transparency, and supports sustainable city management through data-driven decision-making.
Key Features

• Citizen Portal – Real-time issue reporting with geolocation and image uploads
• AI-Powered Analysis – Automated severity assessment, anomaly detection, and forecasting using Google Gemini AI
• Authority Dashboard – Live issue tracking, analytics, and team dispatch system
• Public Transparency Portal – Interactive map views and open dashboards
• Mobile-First Design – Fully responsive and optimized for all devices

Technologies: React (Vite), JavaScript, Tailwind CSS, Leaflet / React-Leaflet, Recharts, Socket.io, Firebase

ChargeShare – EV Charger Rental Platform **2026-under-development**

Developed a web-based platform that allows EV drivers to find and book nearby private charging stations shared by charger owners. The system includes charger listings, booking simulation, and an owner dashboard, with architecture prepared for future backend and database integration.

Technologies: React (Vite), TypeScript, Tailwind CSS, React Router, JSON (Dummy Data), Git & GitHub

Future Enhancements: Node.js, Express.js, MongoDB / MySQL, Google Maps API, Payment Integration

---

Technical Skills

- **Languages** : Java, JavaScript, TypeScript, HTML, CSS, C#
- **Frontend**: ReactJS, NextJS, Tailwind CSS
- **Database:** MySQL, MongoDb, FireBase
- **Backend:** NodeJS
- **Other tools**: Git, Figma, Canva

Soft Skills

Communication, Team work, Problem solving, Adaptability

Extra curricular activities

National Taekwondo Medel Holder
